INGESYS IT

Unified access to distributed data sources

The natural tendency of businesses to expand into new markets and locations leads to situations in which efficient information management marks the difference when it comes to reaching targets successfully.

Lack of integration between diverse sources of information, which moreover is often geographically distributed, limits a business's capacity to meet market objectives in relation to efficiency, profitability and progress as well as its ability to respond to technological advances.

INGESYS® IT offers a unique solution for such situations in which all process information needs to be unified and available from anywhere at anytime.

The main objective is to optimise the management of the resources available, making the investment profitable and adapting to market trends as well as to the latest technologies.

Solution adapted to the needs of each client and each user

Thanks to its modular, open and flexible architecture, INGESYS® IT, offers an integration solution which is scalable at all levels.
It enables each client to have a custom-made solution which is easy to use, economical and capable of adapting to current and future requirements.
INGESYS® IT also offers access to both unified and customised information. INGESYS® IT also provides process information at any level in your corporate structure anytime, anywhere and in a format which completely adapts to the requirements of each user profile.

Standard-based

INGESYS® IT is based on highly-renowned communications standards (OPC, COM/DCOM, Web Services, XML, etc.) which assure its capacity to integrate with a wide range of industrial devices and third-party systems.
INGESYS® IT also offers advanced mechanisms for facilitating this type of integration and for adapting to the specific requirements of each client, the market and technologies.

Optimising investment

INGESYS® IT offers a solution which optimises resources, protecting you current investment and guaranteeing an increase in your business's profitability.

Optimised information management makes it possible to speed up decision-making and makes tasks such as operating and maintaining the process easier, thus considerably reducing costs in terms of staff, call-outs, losses due to stoppages, etc.

Such improvements in process management also have a direct effect on other aspects that benefit to the company, such as increased productivity and quality in the product manufactured.

Advantages

- Unified, fast, secure and efficient access to information from a variety for geographically distributed data sources.
- Information island integration.
- Information available at anytime, anywhere.
- Open, standard-based design.
- Fully-customisable access to information per user profile.
